

Challenge

Airlines want operational control tools that will enhance operating efficiency and personnel productivity.

Solution

OPSControl system integration allows operations control personnel to monitor more aircraft and manage more flights while maintaining peak, bottom-line efficiency.

Economical, integrated operations control

OPSControl is Jeppesen's highly cost-effective flight operations management solution. It incorporates our suite of flight planning and operations control products, offering dynamic system interfaces that assure quick and easy access to all types of flight information.

OPSControl delivers built-in efficiency, automating and streamlining many operations. It is ideally suited for organizations where the dispatcher or flight operations officer is expected to perform multiple functions. Designed to run on off-the-shelf, PC-based servers and workstations. OPSControl requires a minimal hardware investment.

Jeppesen's OPSControl provides:

- Flight manager (JetPlan®, Jeppesen weather service, OpsData®)
- 24x7 multi-tier system administrative support
- Integration of internal services with external systems
- Internet delivery of flight plans and weather briefings with Easy Brief
- Smart Alerts

Interfaces directly with the following systems:

JetPlan Flight Planning – GUI access allows for managing workload through desks

- Jeppesen NavData® is proven and flexible – it's the standard around the world
- Dynamic optimization capabilities assure efficient flight plans
- Accommodates a wide variety of aircraft, single-engine turboprops to wide-body transports

Jeppesen Weather Services – Instant access to worldwide weather and NOTAM data

- Jeppesen worldwide advanced weather graphics

OpsData Runway Analysis – Eliminates time-consuming paper-based runway analysis

- Automatically integrates runway analysis calculations in the flight planning process

Easy Brief – Provides remote access to information important or critical to safe flight operations

Third Party Interface Capability

- Crew Scheduling
- Maintenance
- Reservations
- Communications
- Compatible with Frame Relay, SITA, AeroNet, ARINC/SITA, PPP, dedicated line, facsimile

Built-in efficiency

- Monitor more flights, more aircraft, and maintain peak efficiency
- Reduce delays, speed recovery from weather/maintenance delays
- Minimal user interaction to process and assemble critical flight information before each flight
- Automatically creates and distributes correct network message when changes occur
- Notifies dispatchers of changing conditions throughout the route system

Operational data at your fingertips

- On-time performance
- Flight times
- Fuel burn
- Delays
- Cancellations
- MEL/CDL
