

Aspen Tech Note to Clarify MFD Database Date

Tech Note 2010-02

January 11, 2010

The purpose of this Tech Note is to identify the correct effectivity dates for the Jeppesen database used by the Aspen Multi-Function Display using MAP Software version 2.1.

The Aspen date algorithm in the Multi-Function Display (MFD) incorrectly shows the third digit in the year 2010 as '0' rather than '1'. As a result, the year indicated on the MFD for the Jeppesen database used by the Aspen Multi-function Displays shows '00' instead of '10'. The day and month are correct. When the date on the initialization screen and on the menu page shows '00', 2010 is the correct year. This issue will be corrected in the next Aspen EFD1000/500 software revision.

The Aspen Primary Flight Display is unaffected.
