

FLEXIBLE USE OF AIRSPACE CONDITIONAL ROUTES - EUROPE

GENERAL

Conditional Routes (CDRs) are designed to complement the permanent ATS route network. The purpose of CDRs is to allow flights to be planned on ATS routes or portions thereof, which are not always available. CDRs are generally established through areas of potential temporary allocation identified under the generic term "Temporary Segregated Areas" (TSAs).

CDRs are divided into three different categories according to their foreseen availability, their flight planning potential and the anticipated level of activity of the associated Temporary Segregated Area or Areas.

CDR can be established in one of the three following categories:	
CDR 1	<ul style="list-style-type: none"> - A permanently plannable CDR during the times shown in AIPs. - In the rare occasions of closure, the affected CDR will be listed in Part B of the "Conditional Route Availability Message" (CRAM) issued daily by the Central Flow Management Unit (CFMU).
CDR 2	<ul style="list-style-type: none"> - A non-permanently plannable CDR. Flights may be flight planned on CDRs 2 only as promulgated in the daily CRAM. - Note that the CRAM is available at Airport Reporting Offices (AROs) and at Crew briefing offices of Companies/Ground Handling Agencies having requested the CFMU to be on the distribution list.
CDR 3	<ul style="list-style-type: none"> - Non plannable CDR usable only on a tactical basis by ATC. CDRs 3 are not listed in the CRAM.

Refer to the Jeppesen European Air Traffic Flow and Capacity Management (EATFCM) User Guide for details on the European Flexible Use of Airspace (FUA) concept and on Flight Planning on CDRs.

Unless otherwise stated all times are local time.
