Text section 2.3: EFF 20 NOV 24 ATS surveillance services and procedures estbld (part 1/2): When an ACFT carries a serviceable SSR transponder, the pilot shall operate the transponder at all times during flight. Pilots shall not operate the IDENT feature unless requested by ATS. When entering the Riga FIR, pilots who have already received specific instructions from ATS unit concerning the setting of the transponder, shall maintain that setting until otherwise instructed. Except specific contingency situation, pilots shall: select codes as instructed by the ATS unit; or in the absence of ATS instructions related to code setting, select Mode A code 2000; or when not receiving air traffic services, select Mode A code 7000 in order to improve the detection of suitably equipped ACFT.

Text section 2.3: EFF 20 NOV 24 ATS surveillance services and procedures estbld (part 2/2): Emergency procedures: The pilot of an ACFT equipped with SSR shall select Mode A Code 7700 to indicate a state of emergency unless ATC has previously directed the pilot to operate the transponder on a specified code. In the latter case, a pilot may nevertheless select Mode A Code 7700 whenever there is a specific reason to believe that this would be the best course of action. Radio communication failure procedure: In the event of a radio communication failure, Mode A code 7600 shall be selected. Applicable radio communication failure procedures are to be followed. Unlawful interference procedure: The pilot of an ACFT which is subjected to unlawful interference shall attempt to select Mode A Code 7500 to provide an indication of a state of unlawful interference. If circumstances so warrant, Mode A Code 7700 should be used instead.
