Electronic Flight Bag

The Worldwide Standard.

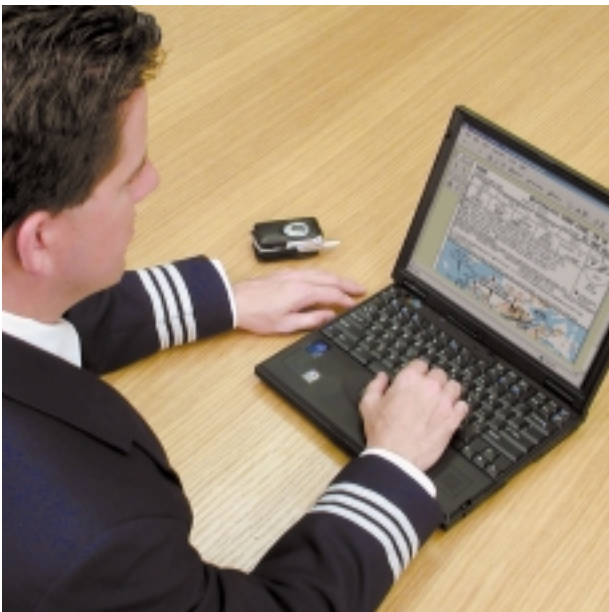

CHALLENGE

Flight crews need current and reliable electronic charts for an EFB in a familiar and easy-to-use format.

SOLUTION

Jeppesen charts are the worldwide standard for current, reliable navigation information and are used by more pilots around the world than any other. Jeppesen's electronic terminal charts for the EFB provide rapid access to current flight critical navigation information, while reducing and eventually eliminating the need for paper charts. The commonality of design and format between Jeppesen's paper and electronic charts allows pilots to easily transition to electronic charts on the EFB.

JEPPESEN CHARTS

Why do pilots around the world choose Jeppesen charts?

- Consistent, easy-to-use format.
- Full color terminal charts – terrain contours in brown, water bodies in blue.
- Clear and concise Briefing Strip™ approach chart format.
- Bi-weekly revision cycle ensures currency of information.
- Worldwide coverage.
- Easily tailored to customize content.

JEPPESEN ELECTRONIC CHARTS

GLOBAL NAVIGATION INFORMATION

JEPPESEN ELECTRONIC CHART APPLICATION FOR EFB

The proven design and content of Jeppesen charts are enhanced through the EFB electronic chart application. Jeppesen electronic charts are full-featured, vector-graphic charts for maximum readability and performance. The EFB provides quick and easy access to current Jeppesen charts:

- Approach Charts
- Airport Charts
- Airspace Charts
- Departure Procedures (SIDs)
- Arrival Procedures (STARs)

STATE-OF-THE-ART FUNCTIONALITY

Quick and intuitive airport and chart search. • Ability to pre-define specific charts for a flight with up to four alternate airports. • Chart zooming and panning. • User controlled chart “split view” for easy access to chart, header, plan view, profile, and minima. • Nearest airports capability for instant access to charts for airports in your vicinity. (Requires GPS input.) • Copy pre-selected charts from one onboard EFB to another, enhancing cockpit resource management.

CHART UPDATES

Pilots depend on Jeppesen for current chart and navigation information. The revision process for electronic Jeppesen charts is accomplished through Jeppesen’s proprietary Data Distribution and Management (DDM) system. The Jeppesen DDM system ensures quick and accurate delivery of electronic chart updates for loading on the EFB.

FUTURE CAPABILITIES

Jeppesen continues to evaluate and perform research on ways to further enhance the display of its electronic charts. One area under study is ways to “de-clutter” chart images to show only that information relevant to the current phase of flight.
