

Multiple Approach Indicator Procedures Exceptions List

Jeppesen recently began delivering Multiple Approach Indicator Procedures to our customers. A Multiple Approach Indicator Procedure is one which has a special designator such as a Y or Z in the approach title; for example, RNAV (GPS) Z Rwy 22. However, not all avionics equipment is able to accept these added procedures. If your avionics equipment cannot handle a Multiple Approach Indicator, it will usually contain one of the procedures without the Multiple Approach Indicator; for example, RNAV 22. In most cases, the Z procedure is the one contained in your database. However, in cases where an RNAV (RNP) or an RNAV (GPS) procedure with 'LPV only' minimums is designated as the Z procedure, we will include the Y, X, etc. procedure in your database.

The following procedures are a current list of those exceptions:
